This is really an encyclopedia on `sendmail`. The authors did a great job in de-mysterifying this complex email routing and delivering program .... The book is divided into four parts. Part One is a tutorial on understanding sendmail from the ground up .... Part Two deals with practical topics in sendmail administration .... Part Three is a comprehensive reference section .... Part Four consists of appendices with details ....

ISBN 1-56592-056-2. 830 pp. US$32.95. While not strictly an Internet book this tome focuses on one thing: the UNIX program sendmail, which is a huge part of how electronic mail moves around on the Internet. Mainly for system administrators, the book shows how to use every function, mode and mood of sendmail to get your e-mail where it's going. A great, if single-minded, book.

This small book focuses on choosing the best type of network connection for your personal, school or business needs, and how to get the best price for the type of access you require. Explains the differences between SLIP, PPP, ISDN, X.25 and other options. Includes an extensive list of Internet service providers. This is a single- purpose book, telling how to choose a connection and get online. It doesn't try to teach you how to use the 'net once you're there. That is graceful in its simplicity.

It details the various computer networks with gateways to the Internet. It is common to cite such works as "indispensable": in fact, most users, and even site managers, muddle along quite happily without it. Quick reference "electronic" versions exist of very similar documents, which provide the addressing schemes for the more common network and commercial service gateways. Frey and Adams have, however, put together a very complete and interesting reference, and I do suggest it to anyone managing, or using, extensive email correspondence. As a user of electronic mail, or the manager of a small Internet node or UUCP site, it would be hard to say that you "need" this book. If, however, you are at all interested in the topic of email, you will find this fascinating and useful.
