Índice

1 Dates and dialects

1 de enero del 2006. Era en español. Pero algo en inglés: The very 1st of next month and 1st January 2006. . . and in American January 1, 2006. Two spellings (with a macro with different definitions for `english` and `usenglish`): colour and color (outside: undefined).

2 Escaping to Unicode.

Ligatures fi `fi`:

    f in text, i escaped to Unicode:

        UTF-8: fi `f\utfstring{i}`

        Unicode code: fi `f\unichar{"69}`

        Unicode text: fi `f\unitext{^^^^0069}`

    Now f escaped and i in text:

        UTF-8: fi `\utfstring{f}i`

        Unicode code: fi `\unichar{"66}i`

        Unicode text: fi `\unitext{^^^^0066}i`

- At this point, `\ini{languageset}[names]{russian}`

3 Предисловіе

Глава. Предисловіе. And more .■.■.■.§ (Russian).

And more .Ø.ß.½.¾.§ (Not Russian any more: barred O, long s, one half, three quarters, section as macro).

4 Accents

ṭ `t\unichar{"0326}`.

$\dot{\underline{x}}$ = `\'{\d{\"{x}}}` $\dot{\underline{x}}$ = `\d{\'{\"{x}}}` $\dot{\underline{x}}$ = `\'{\"{\d{x}}}`

Wǔ = `W\v{ü}`   Wǔ = `W\v{\"{u}}`.

5 Adding processes

Percent in Spanish: 100% [%] (`100\% [\%]`).

- In the preamble:

```
\SetLanguage{spanish}
\AddLanguageProcess{text}{percent}
\SetLanguageProcess{percent}{}
```

- And at this point: `\SetLanguageProcess{percent}{sppcent}` (with `\SelectProcesses`)

Again: 100 % [%] (`100\% [\%]`, as before; note the thin space between the number and the sign, and only at this place.)

The only expression in `sppcent` is

```
('0'-'9')@"E125   => \1 "\kern.25em " \2;
```
