Symbols defined by `unicode-math` as transcribed in Braille by `latex2nemeth`

A. Papasalouros and A. Tsolomitis

Department of Mathematics, University of the Aegean

May 19, 2022

This document follows roughly the grouping of Unicode math symbols of the file unidoce-math.pdf by Will Robertson, and it presents the characters and their Braille equivalents supported by latex2nemeth.

Symbols that have their Braille column blank are not supported by Nemeth itself; usually rightfully (in case they make no sense for the blind, such as building blocks of large delimiters).

The authors would like to acknowledge support by the TUGfund for this project (TUGfund project 33).
