

NAME

`cef5conv` – convert a TeX document in Big 5 encoding containing CEF macros into ‘preprocessed’ form.

SYNOPSIS

`cef5conv < infile > outfile`

DESCRIPTION

The **Chinese Encoding Framework (CEF)** developed by Christian Wittern <cwittern@online.central.de> makes it possible to include CJK characters in various encodings using the SGML macros **&CX-aabb**; for Big 5 and CNS encoding and **&U-aabb**; for Unicode (**X** denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS encoding planes 1-7. **aabb** is either a decimal or hexadecimal number).

`cef5conv` converts the CEF macros of a Big 5 encoded document together with the Big5 encoding itself into a form which can directly processed with $\text{\LaTeX} 2_{\epsilon}$. It is identical to

`bg5conv < infile | cefconv > outfile`

This filter is part of the **CJK** macro package for $\text{\LaTeX} 2_{\epsilon}$.
